# Digital Signage in a nutshell

All the benefits of digital signage and interactive kiosk systems with the versatility of a compact solution

With **s-Module**, designed and developed by Polygon, implementation of the latest visual merchandising technology is easy now for your company - even in environments where space is critical.

Thanks to its compact dimensions, small footprint and low weight, **s-Module** is the ideal solution for places where you, until now, could not make use of digital signage benefits due to structural or space restrictions.

All you need for **s-Module** is a power socket. There is no mounting or wall drilling necessary, just plug it in and profit by the 40" or 42" portrait display bringing your multimedia content right into your customer's view.

**i-Module** is a fully fledged interactive kiosk system, although one would not expect it by its sleek, minimalistic looks. In its housing, a 19" display and embedded PC give you all the options you can expect from a terminal. Stainless steel keyboard, scanner, kiosk printer, card reader - integration of different in- and output devices provides a solution tailor made for your specific requirements.

Combining the two, **s-Module** and **i-Module**, will give you the best of both worlds: the eye-catching and interest raising effect of a big display as well as the interactive options of a kiosk system. Customers are attracted by the pictures on the large screen and can then gather specific and individual information on the touch screen, while you even save on hardware costs: **s-Module** can be controlled by and fed from **i-Module**, sparing one computer.

◀◀ **s-Module 32** offers a freely configurable front panel that makes it an ideal kiosk system with the ability to integrate a large variety of in- and output devices

◀ The large, wide opening front door provides easy access to all internal components, enabling quick and effortless maintenance and updating

◀ Individually adaptable configurations for all kinds of applications and premises

◀ **i-Module**, the sleek kiosk solution with a wide range of possible set-up options

◀ With its table stand, **i-Module** can be used as a counter solution

◀ **i-Module** can also be wall mounted, requiring even less space

### Technical specifications s-Module 42

ready for integration of components from different manufacturers:

- 40" or 42" full HD display (for continuous duty)
- with baseplate stability compliant DIN EN 60950

optional features among other things: safety glass pane, optical touchscreen with multi-touch, kiosk printer, barcode scanner, speakers

### Technical specifications s-Module 32

like **s-Module 42**, but with 17", 19" or 22" display in landscape format or 32" display in portrait format

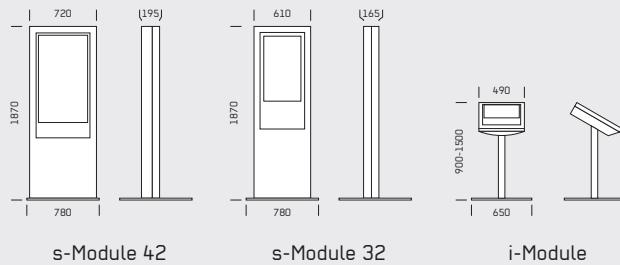

additional features among other things: stainless steel keyboard, card reader, EC cash unit, banknote acceptors

### Technical specifications i-Module

ready for integration of components from different manufacturers:

- 17" or 19" display with touchscreen
- with baseplate stability compliant DIN EN 60950

optional features among other things: stainless steel keyboard, kiosk printer, speakers, card reader, barcode scanner, RFID card reader

the complete technical specifications can be found in the corresponding data sheets

### From pioneer to market leader

Polygon is one of the pioneers in the emerging market of kiosk systems. We create, manufacture and distribute kiosks highly focused on aesthetics and function. Since 1992 Polygon has been producing more than 7,000 kiosks for retail, automotive and many other markets.

### Shape is the key for acceptance

Based on our long lasting experience with our customers and their users we know the key factors of success for kiosk projects. Attract the users and they will engage with the content on the screen. Only pleased users will then give the operator the necessary acceptance rates to offer various self-service solutions on kiosk systems.

Polygon kiosks are developed and produced in close collaboration of designers, engineers and production specialists. With more than 80 customised product developments for different well-known customers, Polygon has established market leadership in this area. Our widespread experience ensures the highest quality in design, material, ergonomics and technology.
