

Employee self service kiosk systems

ESS (Employee Self Service) in your company

Using ESS kiosk systems, human resources management in your company can be made leaner and more efficient by transferring routine tasks to blue-collar employee.

The standardisation of processes saves costs and your staff also profit from improved information transfer.

The systems are set up in production halls, canteens, or break rooms and can be used at any time by all staff who do not have a PC at their desk or work location-even shift workers.

The extensive experience gained by Polygon in the field of interactive kiosk systems ensures a reliable, ergonomic, and future-orientated product. In short: a product which impresses in every way.

Overview of the possibilities

- Display/print payroll account
- Administer staff schedules
- Make holiday requests
- Handle time recording
- Call up job advertisements
- Register for training sessions
- Administer your own data in the personnel file

The perfect solution for any location

Polygon supplies ESS kiosk systems based on different housing concepts which all bring together Polygon's cumulative experience in constructing terminals. Whichever variant you choose, you do not have to make any compromises regarding features: all of them can be combined with a multitude of different thermal and laser printers and have a front door which makes service access to the technical components easier. The printing output slot is positioned on the front so that everything going on inside is perfectly protected against dirt. An optional feature is the inclusion of a concealing screen and/or a privacy filter film. We are going to introduce example variants here.

▲ The representative **ESS disPOSer** has an impressively slim, elegant appearance. The housing structure, consisting of a body and panels, also provides plenty of opportunity to adjust its colours to your company's CI.

◀ The **ESS desk** combines top-quality and ergonomic housing with fully developed hard and software. Thanks to its robust construction, durable surfaces, and solid impact protection, it is particularly suited to use in difficult conditions. Other designs are available (see little pictures).

Wheelchair access
ergonomic design allows unrestricted use

Made in Germany
Production and installation certified in accordance with ISO 9001 ensures a high level of quality

CE certification
stable without being bolted to the floor, EMC-tested electronic components

Data security and user friendliness, the key to user acceptance

Data security plays a decisive role in how staff trust their new ESS solution. In this respect, Polygon has provided a unique feature with the integrated document shredder: the modular system, consisting of the Polygon paper transporter unit and the Polygon paper shredder, that can be

used irrespective of manufacturer and print type.

The transport unit takes the paper from the printer and has a presenter and retract function. If a print-out is not removed, it is destroyed by the document shredder according to the data protection. This means that confidential data such as payroll accounts are protected in the best possible way. Alternatively, an internal paper shelf can be used.

High-quality hardware in combination with an intelligent cooling concept ensures the components have a long life and are always working.

- Benefits of the Polygon ESS solution**
- robust and reliable
 - long service intervals
 - 24/7 availability, perfect for three-shift operation
 - unique combination of paper transporter unit and document shredder
 - can be integrated into existing software environments such as SAP ERP HCM
 - secure browser

The secure browser and the occupancy sensor together ensure that no data remains on the system. As soon as the user leaves the system, the session is closed and all data is deleted from the cache.

Polygon ESS kiosk systems can be integrated into an HCM environment in your company, irrespective of whether it is SAP ERP, Microsoft Dynamics NAV, VRG HR PAISY, or any other software.

If you have not worked with such a system before, we will find the ideal solution for you together with our software partners.

Security as standard

The document shredder reliably destroys confidential print-outs in acc. with standard DIN 32757-1

Features and technical data

Basic features

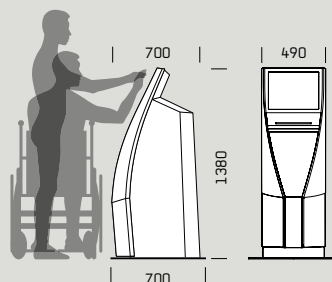

- Housing, panels, and base plate made of steel
- 19" display
- Touch screen with hardened glass pane
- Active loud speaker
- Industry PC
- IP65 stainless steel keyboard with track ball
- Thermal or laser printer
- Polygon paper transporter unit (when using a laser printer)
- Polygon document shredder or paper shelf
- Movement sensor
- SiteKiosk-licence (secure browser)

Optional features

- Housing colour on request
 - Concealing screen and/or privacy filter film
 - Warranty extension
- other features on request

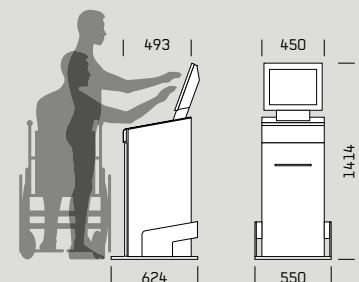

ESS disPOSer

- Housing H x W x D: 1380 x 490 x 700 mm
- Base plate Ø: 700 mm

ESS desk

- Housing H x W x D: 1414 x 450 x 493 mm
- Base plate W x D: 550 x 624 mm

technical modifications, errors, and slight colour discrepancies excepted
